A PROSPEROUS GROWTH AGENDA FOR E2 MANUFACTURING Demand in Production Requires E2 to Add Another Machine

Waukegan, IL, 10/30/13- E2 Manufacturing Group LLC announced the addition of another Netstal Synergy, Multishot Injection Molding Machine to their rapidly growing manufacturing enterprise, due to an increase new business and a large increase in current customer demand.

E2 sets itself apart from many other plastic injection molders in the industry for two reasons. First they practice a 'traditional single and true two shot injection molding' process. Parts of two different materials can be produced with the speed and efficiency that eliminates the labor-intensive secondary operations used in the past, and replaces them with high-speed automated operations, to yield a more consistent, higher quality manufactured part at a significantly lower cost. Second, they have the finest people, equipment, and facilities to produce world class products on time every time.

Robert Hamilton, partner and COO stated, "Since 1998 we've continue to pursue manufacturing perfection with a precise mix of quality, service, and dedication to all of our customer needs. And as a result we continue to experience exponential growth". Hamilton goes onto to say, "With an increase in machines running seven days a week, and an increase in customer demands we're only seeing signs of a strong, promising year (2014) ahead".

E2 is an ISO 9001-2008 certified plastics and contract manufacturing corporation, and holds over twenty years' experience in contract manufacturing.

E2 Manufacturing is one of the top Plastic Injection Molders in the U.S. offering world-class single and two shot clean room injection molding and contract manufacturing. The company is privately held and located in Waukegan, IL. Visit E2 online at www.E2-mfg.com.
